Opera SE

Opera 3 SE is undoubtedly a powerful business solution, but how can businesses be sure they're making the most of the many features and functions it offers? Here are five steps to unlock the full potential of Opera 3 SE, all of which help to boost productivity, drive performance and scale for growth.

INTEGRATION WITH THIRD PARTY PRODUCTS

One of Opera 3 SE's most valuable features is its ability to integrate seamlessly with third-party products, delivering greater, more in-depth visibility across the entire business. Be it CRM systems, supply chain management tools or other industry-specific software, Opera 3 SE can easily connect with other solutions and systems, creating a unified view of all business processes.

This integration helps eliminate data silos, reduces the need for manual data entry, and the inevitable errors this causes, not to mention the time-consuming nature of inputting data manually. As well, it enables the sharing of information across business functions and departments in real time.

Making the most of Opera 3 SE's integration capabilities furnishes a business with a more holistic view of the organisation, delivering the right information to the right people, faster, which facilitates swifter decision-making and improved strategic planning.

DATA CONNECTOR

The Pegasus Data Connector helps to unlock the power of business data and is a must-use tool when working with Opera 3 SE. It provides access to business data in real-time, providing dynamic and detailed insights into every aspect of business operations. Whether analysing financial performance, tracking inventory levels or monitoring customer trends, the Pegasus Data Connector makes this all possible.

It seamlessly integrates into Microsoft Excel, Power BI, SharePoint, Copilot and many more, which enables users to pull in the data needed for detailed reporting and analysis without the need for any complex technical skills. This gives non-technical users the power to manipulate and analyse data independently, present it in different ways to suit your business needs and facilitate more data-driven decision-making right across the business.

What's more, using powerful Artificial Intelligence (AI) functionality you can set up critical alerts to notify you of issues occurring such as a credit limit being exceeded. The options for alerts you can create are endless, but Opera 3 SE does all the hard work so you don't have to.

Did you know only 3% of businesses can retrieve their data in seconds?

Data-driven businesses are three times more likely to report significant improvements in decision making
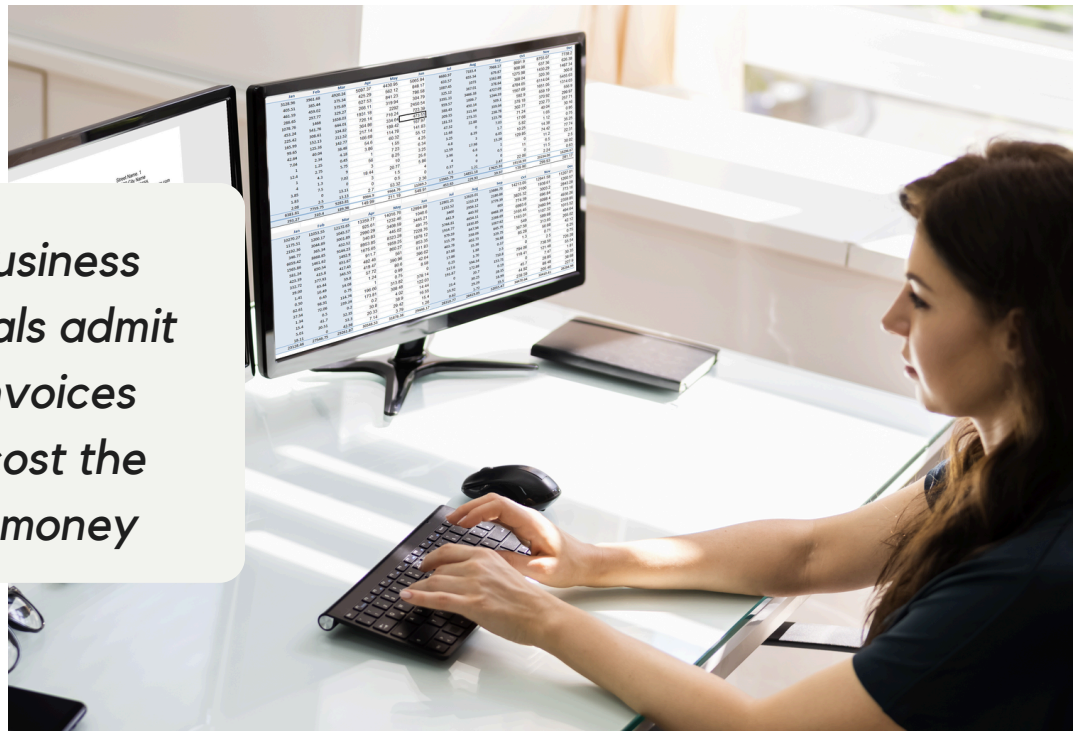

AP AUTOMATION

Opera 3 SE offers a powerful AP Automation feature that can help streamline the entire accounts payable processes. By automating manual tasks such as invoice approvals, data entry and payment processing, this feature not only saves time but also reduces the risk of invoice fraud and minimises the likelihood of human error that can be so common with manual data entry.

Digitising Accounts Payable can cut costs by 50-75% and speed up processing times by 30%
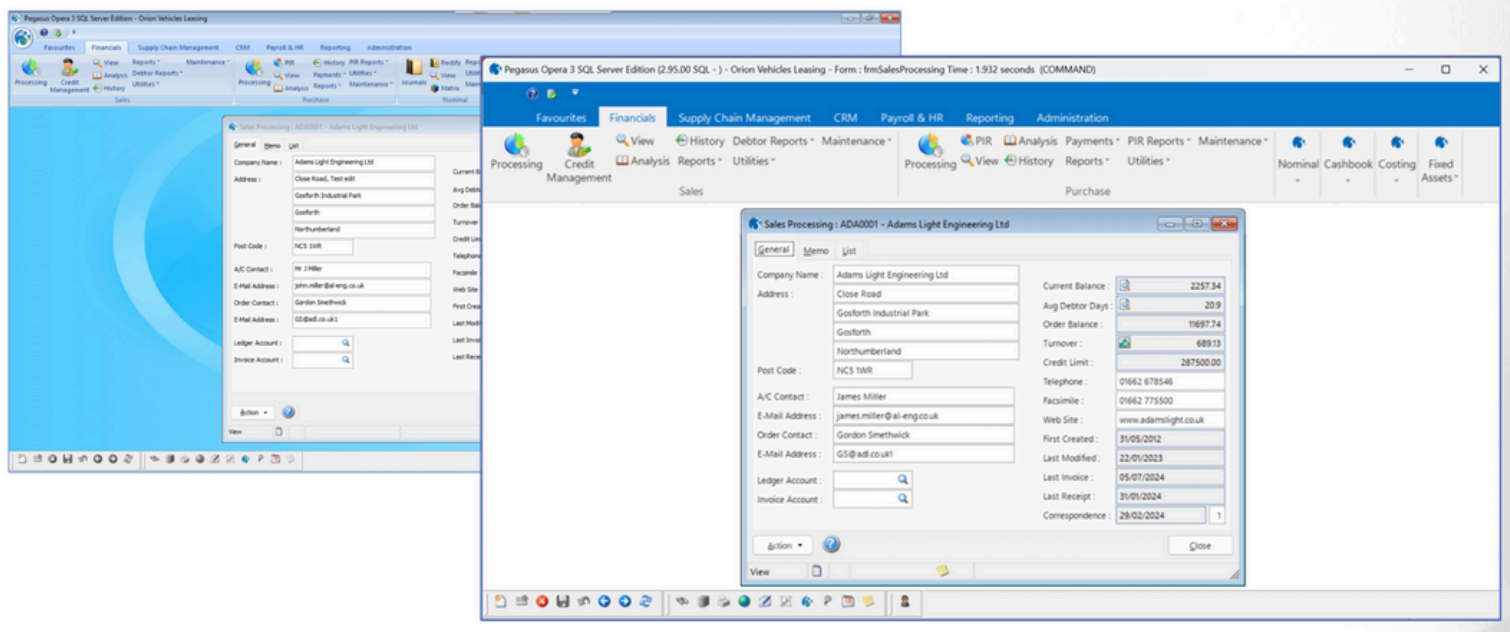

By taking full advantage of this automation, businesses can give employees more time to dedicate to strategic, value-add tasks rather than focussing on often time-consuming, manual administrative duties. As well, thanks to the levels of efficiency this automation can unlock, businesses can also benefit from improved cash flow management, more timely payments and smoother supplier relationships.

39% of business professionals admit paying invoices late has cost the business money

ENHANCED USER INTERFACE

Opera 3 SE's new intuitive, user-friendly interface is the newest addition to be released. It makes the software easy to use, helping to smooth the way for wider adoption right across the business. This ease of use helps ensure that all departments can easily adopt and navigate the system, which inevitably results in less time taken to onboard new users and less time spent on technical queries, both of which have a positive impact on productivity.

"Opera 3 SE has surpassed our expectations in the benefits it's delivering" Tim Scott, Company Director at Foregale

"Not only did Opera 3 SE give us the additional functionality and scale we needed, crucially without a need for significantly more investment" Gerald Jamieson, Financial Controller at the NWH Group
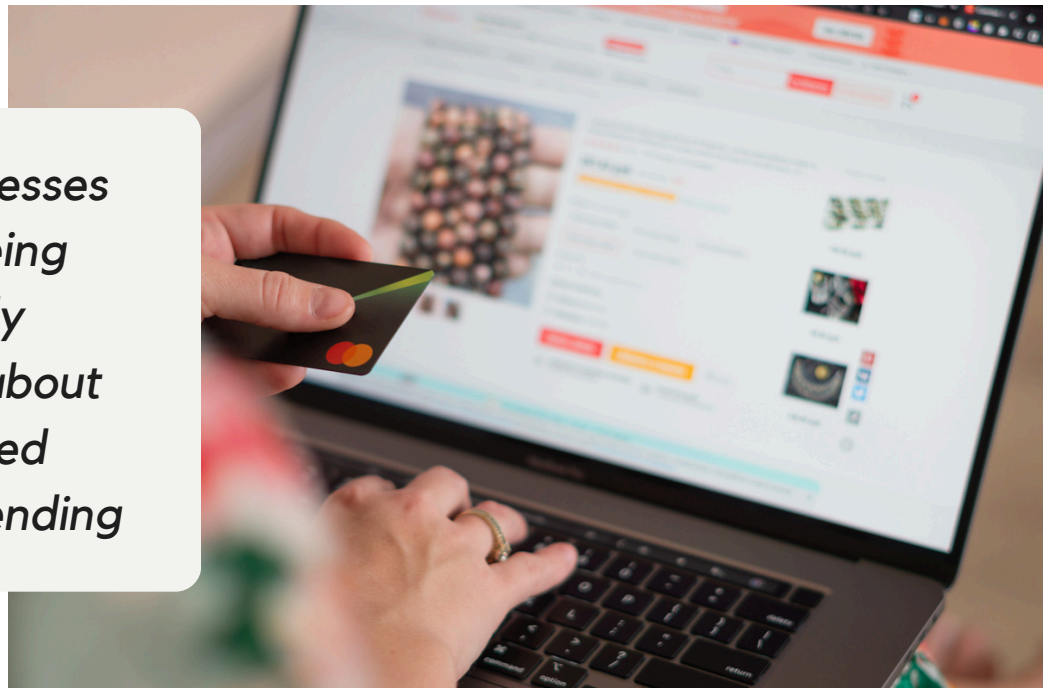

ONLINE BUYING

Another very useful facet of the AP Automation feature is the Online Buying functionality, which helps to simplify procurement. By integrating online suppliers directly into the software, this functionality enables businesses to manage their

60% of indirect business spend is unaccounted for

purchasing processes more efficiently. Businesses can place orders, track procurement and manage supplier relationships all in one place, driving greater efficiency alongside increased oversight and firmer control throughout the supply chain.

Also, the increased supply chain visibility allows the in-house team to make smarter, faster decisions that are grounded in the real-time data within the system, which leads to greater cost control and optimised inventory management.

24% of businesses admit to being 'incredibly concerned' about uncontrolled corporate spending
